

Case 10 KT Amenorrhoea

22year old female whose menstruation stopped for no apparent reason !

Had usual medical investigations which excluded any endocrine or other physical causes.!

There was no perceived emotional component relevant to the onset and continuation of the problem which had been going on for about 10 months ! Also had a mild eating disorder characterised by obsessive attitudes to the type and amount of foods she ate -but she was not undereating !

Diagnosis Netzach and Spleen (over worry, food) and Binah (tends to be controlling) !

Treatment!

I treated Netzach and yesod !

As well as opening the peripheral meridians for spleen kidney and stomach meridians in legs !

And also some resonance Chesed and geburah - soul correspondence to Yesod Whilst talking with her I found she has tendency to control her life and diet to excess so I also gave some resonance to Binah !

Another session opened P6 and Sp 4, thrusting and yin linking pair which I felt was very suitable for her presentation!

I treated her weekly and her periods returned after a month Then I continued treatment for another month and she has since had periods normally!
