

Case 4 DT stroke 2013

59 year old man presented w insomnia and irritability and emotional stress having consistent quarrels with wife he had seen his doctor and also has been diagnosed with borderline high blood pressure.

On examination I could not pinpoint the center of his problems so I gave him a circulation of the light balance where I found blocks in most of the centers with geburah and binah in particular He is a physiotherapist and body worker and aware of his posture but has had a slight hunch at C7 area that was tending towards the left side of his body which he said he has had for some time !

He came a week later and he felt better except that I noticed he was walking with a limp and he felt some weakness in left shoulder and hip. I referred him for brain scan and other investigations It was discovered he had had mild stroke

He was put on medications and intense physiotherapy and came to see me for regular sessions where I concentrated on treating his Stomach and Bladder and GB meridians on his legs as well as Geburah and Binah. The stroke was in the area of the brain stem close to Binah

He recovered fully in two months and his emotional health improved by 70 percent. His wood energy came to life and he felt new hope enthusiasm and creativity and made a range of positive lifestyle choices He still owes me 10 dollars however
