

Case Study

65-year-old male, growth on thyroid

The Story & Emotions

Has nodule on left side of thyroid size of a golf ball.

Decided to have AcuEnergetics® sessions prior to surgery to attempt to decrease size of nodule, and prepare in case surgery is necessary. Waited 7 months to see if it would decrease. It did not.

The Energetic System

Liver, Heart

Treatment – first session

Was given 5 energetic liver flushes from myself and a wellness balancer.

I did withdrawal on thyroid he commented that the pressure was less after withdrawal. Treatments were not consistent. He had surgery 7 months later removing a nodule the size of a medium sized potato, removing left half of thyroid.

Treatment – second session

1 day after surgery, treated with liver flush, and treated with resonance to incision (doctor said that the area will hold fluid in 10-14 days it will get a sac around the area but the body will absorb it)

treatment -third session

6 days after surgery treated with lymph drainage to area, as the area started to get the sac. Instantly the swelling went down. And sac did not continue to develop.

Result/ How it was resolved

Incision looks great, there is no sac. Follow up doctor appointment, Dr is happy with the incision and the healing within the 2 weeks.

Does not need to take thyroid medication.
