

Tinnitus, 9, Male

The Person & Complaint

Client had influenza B for a week which caused a high fever for a prolonged period of time. He now has a high pitched ringing in his head that pings back and forth bilaterally along the line of the TH.

Story & Emotions

This is a very controlled boy who the mom describes as very anxious, timid, and shy. He is also emotionally sensitive and concerned with people looking at him and judging him. His mom is in the Acu community and she has done a lot of Acu on him.

Energetic System

Due to the line where the ringing runs I know his triple heater channel is blocked. The fever caused a big charge to the triple heater system and is locked in his head. I also know that his kidneys are blocked due to the amount of fear he has and they are the special messenger to the TH. The line where the ringing occurs is next to his eyes. I felt this was connected to his occiput where the visual cortex sits as well as C4, which connects to the phrenic nerve. I believe the occiput is very blocked and blocked to his base because of the amount of fear he holds. He also worries and blocks his pericardium/stomach. He has a constant tension in his stomach/navel from the worry/fear and anxiety he feels with life.

Session 1

I worked on TH 3 to TH 21 and 23 because that was the main line in his face where the ringing was heard. After treating those for 15 minutes he stopped hearing any ringing. They felt very hot and electric. The last 10 minutes I worked TH3 to hod. When I went to hod he arched his back and I was able to get a lot more movement in TH channel. His mom was able to intern for me and I had her on occiput to base the entire time. These were very shaky and not connected at all.

Session 2

Clients ringing was gone for 5 days and had just started up again the day before he came in but it wasn't as bad as before. Mom said something had made him really nervous yesterday and his stomach started hurting which it sounds like happens a lot. He still had tension in his stomach. He was a very nervous and hyper aware kid. I had the mom start on TH3 to hod. I went to his stomach organ and CV17 (connected to the TH as well and I could feel the connection) to help him work out the stomach tension. Once I got movement in that he was able to relax. I showed him how to massage his stomach to help him relax when he feels nervous. I went back to TH3 and TH21 and 23. We got these points opened and his hod relaxed. The last 10 minutes we got a flow in his K1's as well.

The ringing did not come back after his second treatment. I advised the mom to keep opening up his female pole and points because of how blocked they were.
